Autism Spectrum Disorder Assessment

Autism Spectrum Disorder effects many children and varies in its presentation and severity. Diagnostic Assessment will allow a Clinical Diagnosis to better understand the needs of your child.

ASSESSMENT SCHEDULE

- **Prep Session 1**
1 hour duration
Child attends with parent
- **Prep Session 2**
1 hour duration
Child attends with parent
- **Face to Face Assessment Session 1**
Administer ADI-R
Parents only attend
- **Feedback Session**
Parents attend only

ASSESSMENT INCLUSIONS

All Psychometric

Assessments include:

- Preparation Session(s)
- Assessment Administration
- Test Equipment
- Feedback Session with Clinical Psychologist
- Multiple Copies of the Psychometric Report

ASSESSMENT FEE

Assessment Measures

- **Autism Spectrum Rating Scale (ASRS)**
The Autism Spectrum Rating Scale (ASRS) is a multidimensional and standardised assessment tool used to quantify observations of children and youth (aged 2 to 18 years old) that are associated with Autism Spectrum Disorder (ASD). When used in combination with other information, results from the ASRS - Parent Form or ASRS – Teacher Form can help determine the likelihood that a youth has symptoms associated with Autism Spectrum Disorder; this information can then be used to determine treatment targets. The ASRS – Parent Form and ASRS – Teacher Form are electronically administered.
- **Autism Diagnostic Interview-Revised (ADI-R)**
The Autism Diagnostic Interview-Revised (ADI-R) is designed for diagnosing autism, planning treatment, and distinguishing autism from other developmental disorders. It is a standardised, semi-structured parent or carer clinical interview that is administered face-to-face by a trained clinician. The interview can be used to assess both children and adults, as long as their mental age is above 2 years, 0 months.
- **Adaptive Behaviour Assessment System – 3rd Edition (ABAS III)**
The ABAS-III is a multidimensional and standardised assessment tool used to assess the functional skills necessary for daily living of individuals between 0 to 89 years of age. It offers a multi-informant assessment of children and youth across multiple settings, with rating forms for parents and teachers. This measure assesses 11 essential skill areas within 3 major adaptive domains: Conceptual, Social, and Practical, facilitating the identification of strengths and weaknesses. The ABAS-III is electronically administered.
- **Specific Tools**
A range of other specific assessment tools selected according to the individual needs of the client.
